Team Name : Gryffindor_

Team Leader Name : Siddharth Jiyani

Problem Statement : AI for Communities, Access & Public Impact

Our solution is a comprehensive AI ecosystem for rural governance that combines legal aid, administrative support, and nutrition monitoring into one interconnected platform:

1. NyayMitra (Legal Aid)

- Voice-based legal notice generation in 12+ languages
- Auto-filing with eCourts, case tracking
- *Serves 85% rural Indians without lawyer access*

2. PanchayatGPT (Governance)

- AI scheme navigator for 200+ schemes
- Smart budget allocation, meeting automation
- *Serves 2.5L Gram Panchayats, 30L representatives*

The Integration Advantage

Unlike standalone apps, shared infrastructure creates synergies:

1. Malnutrition data triggers nutrition gardens (MGNREGA)
2. Legal aid cases alert fraud detection

= Compound Impact Across Governance & Justice

How is this different from existing solutions?

- Existing solutions address **legal aid and governance separately**
  - **Legal apps focus only on cases**
  - **Governance portals focus only on reporting and compliance**
- Most platforms are **urban-centric**
  - **English-only**
  - **Text-heavy forms**
  - **Require high digital literacy and stable internet**
- Current government systems are **manual and reactive**
  - **Paper-based workflows**
  - **Delayed reports and slow grievance resolution**

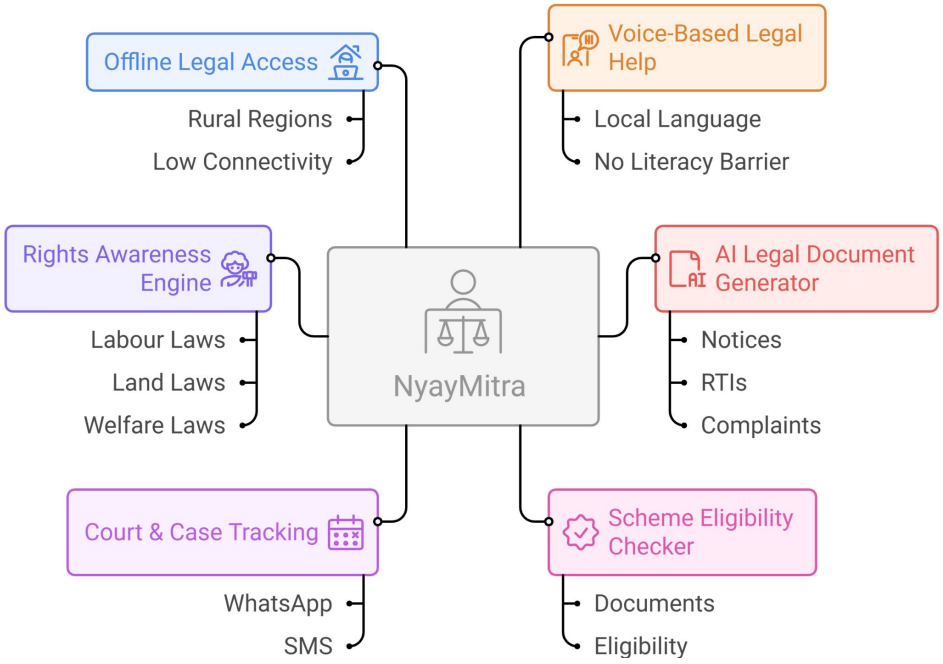
How will it solve the problem?

- **Voice-first interaction**
  - Citizens and Panchayat officials speak in local languages
  - AI converts speech into legal drafts, meeting records, and service requests
- **Offline-first design**
  - Works in low-connectivity rural environments
  - Automatically syncs data when internet becomes available
- **AI-assisted governance**
  - Matches village needs with relevant government schemes
  - Helps Panchayats plan budgets and track fund usage
- **Faster grievance resolution**
  - Issues reported by citizens are automatically assigned, tracked, and followed up
  - Reduces delays and dependency on manual intervention

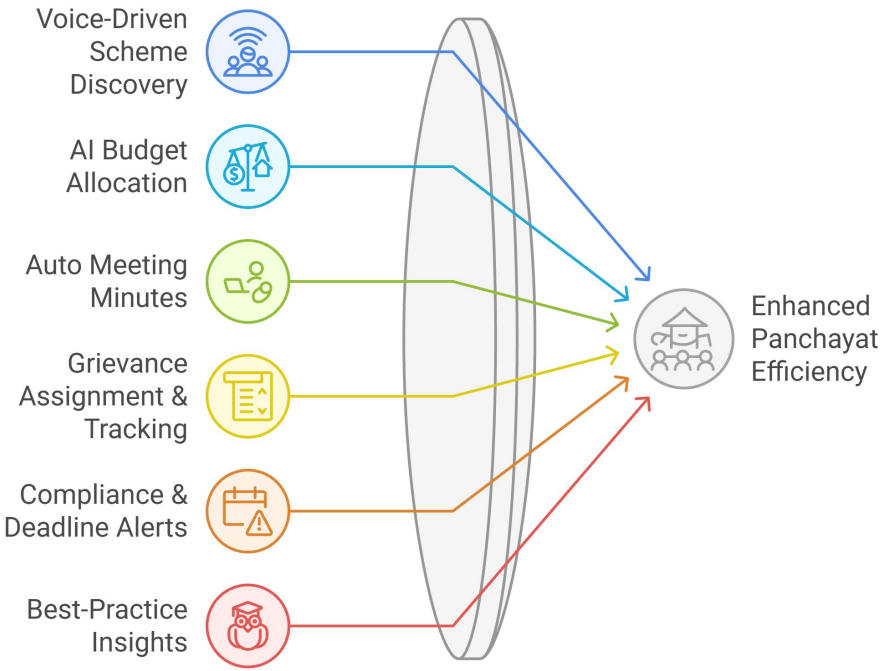
- India's first integrated AI platform that unifies legal access and Panchayat governance instead of treating them as separate systems.
- Cross-module intelligence ensures legal complaints directly trigger governance actions and governance data prioritizes legal and service delivery needs.
- Designed for low-literacy rural users with voice-first, multilingual interaction that works without training or complex interfaces.
- Enables preventive governance by identifying delays, risks, and non-compliance before disputes and failures escalate.
- Government-ready and scalable, seamlessly aligning with existing e-Governance systems for deployment across all Gram Panchayats.

AI for Bharat Hackathon

NyayMitra Features

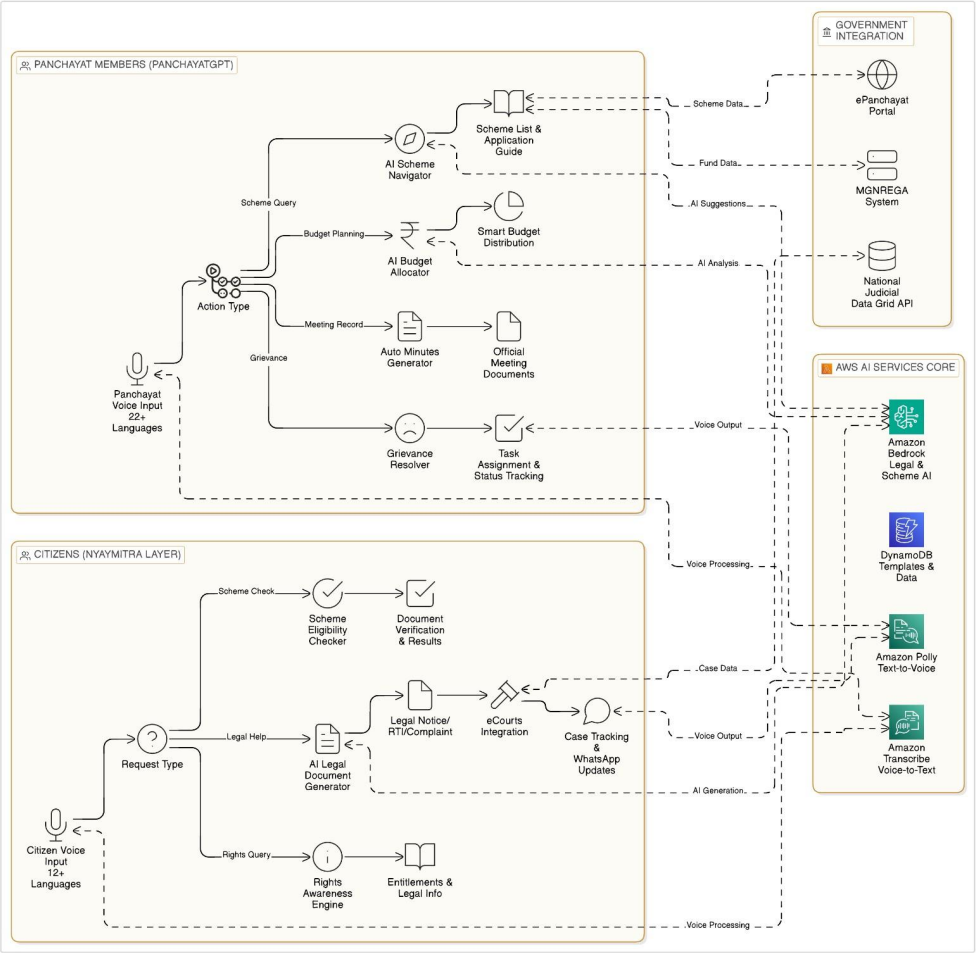


PanchayatGPT Features



Flow diagram of our solution

- **Voice-First Access** for both citizens and Panchayat members in local languages
- **Single AI Core** intelligently routes requests to legal aid, schemes, budgeting, or grievances
- **Automated Document & Decision Support** for notices, applications, minutes, and budgets
- **Deep Government Integration** with ePanchayat, MGNREGA, eCourts, and judicial data systems
- **Offline-First & Low-Bandwidth Ready** for rural and 2G connectivity scenarios
- **Transparent Tracking & Updates** via dashboards, WhatsApp, and voice responses



Mock diagrams of the proposed solution

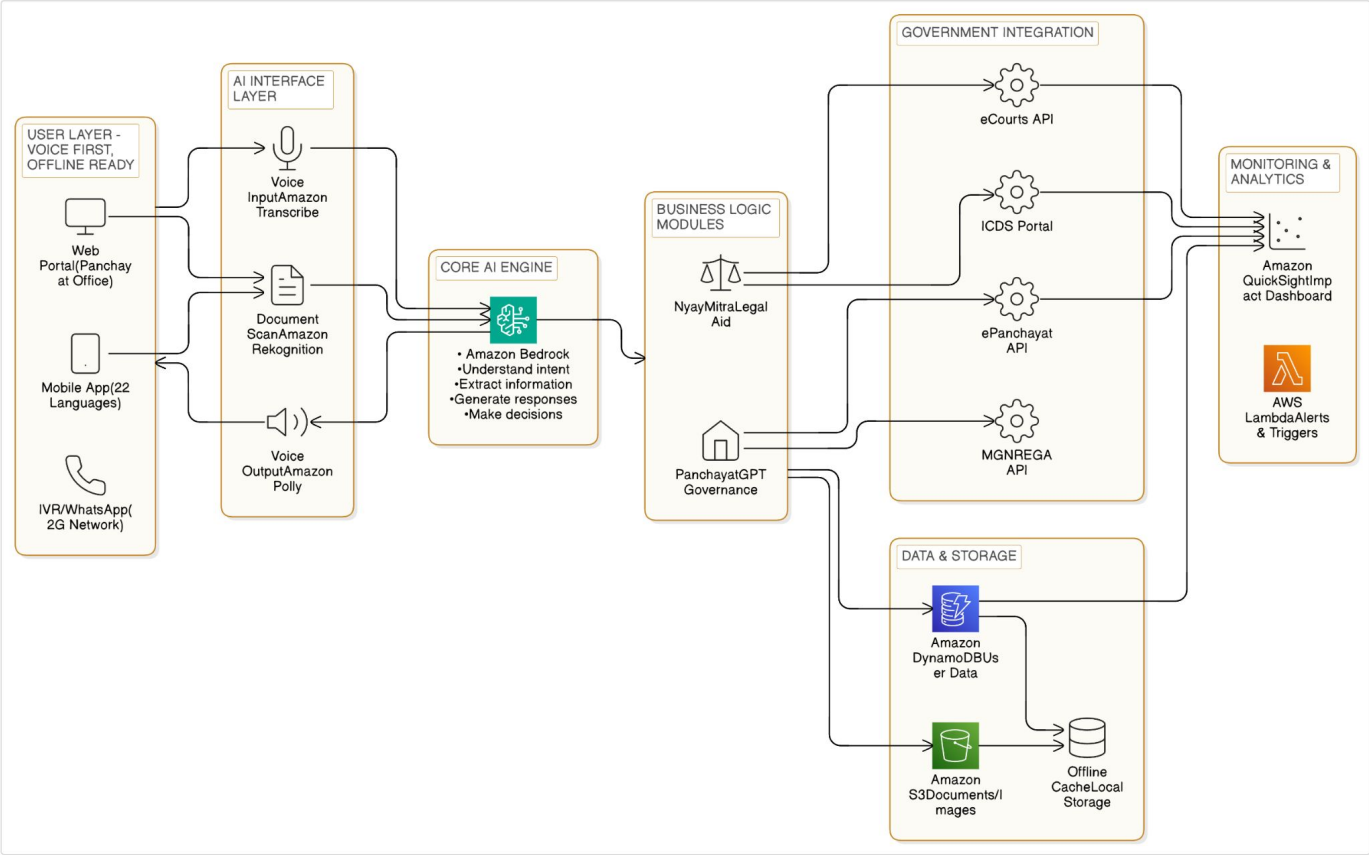
Architecture diagram of the proposed solution:



Technologies to be used in the solution:

Category	Technology Names
AWS AI/ML Services	Amazon Bedrock, Amazon Transcribe, Amazon Polly, Amazon Rekognition, Amazon Comprehend
Compute & Application Services	AWS Lambda, Amazon API Gateway, AWS AppSync
Storage & Database	Amazon DynamoDB, Amazon S3, Amazon RDS Aurora, Amazon ElastiCache (Redis)
Security & Authentication	Amazon Cognito, AWS WAF, AWS KMS, Aadhaar eKYC
Content Delivery & Offline Support	Amazon CloudFront, AWS IoT Core
Messaging & Notifications	Amazon SNS, Amazon SES, Amazon Pinpoint
Analytics & Monitoring	Amazon QuickSight, Amazon CloudWatch, AWS X-Ray
DevOps & Infrastructure	AWS CodePipeline, AWS CloudFormation, Amazon ECR, AWS Backup
External Integrations	National Judicial Data Grid API, ePanchayat Portal API, MGNREGA API, DigiLocker API, UMANG Platform
Frontend Technologies	React.js,, Progressive Web App (PWA), WhatsApp Business API, USSD / IVR
Programming Languages & Frameworks	Python, Node.js, TypeScript
Additional Tools	Terraform, Docker, Git / GitHub
